

Complete Summary

TITLE

Chronic stable coronary artery disease: percentage of patients queried one or more times about cigarette smoking.

SOURCE(S)

American College of Cardiology, American Heart Association, Physician Consortium for Performance Improvement. Clinical performance measures. Chronic stable coronary artery disease. Chicago (IL): American Medical Association (AMA); 2003. 8 p.

Brief Abstract

DESCRIPTION

This measure assesses the percentage of patients with chronic stable coronary artery disease (CAD) who were queried one or more times about cigarette smoking.

RATIONALE

Smoking status should be determined and smoking cessation counseling and interventions are recommended (ACC/AHA/ACP-ASIM, 1999; ACC/AHA, 2000; ACC/AHA, 1999; ACC/AHA, 1999).

PRIMARY CLINICAL COMPONENT

Coronary artery disease; queried about cigarette smoking

DENOMINATOR DESCRIPTION

All patients with coronary artery disease (CAD)

NUMERATOR DESCRIPTION

The number of patients from the denominator who were queried one or more times about cigarette smoking

Evidence Supporting the Measure

PRIMARY MEASURE DOMAIN

Process

SECONDARY MEASURE DOMAIN

Not applicable

EVIDENCE SUPPORTING THE MEASURE

A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence

One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

State of Use of the Measure

STATE OF USE

Pilot testing

CURRENT USE

Internal quality improvement

Application of Measure in its Current Use

CARE SETTING

Ambulatory Care

PROFESSIONALS RESPONSIBLE FOR HEALTH CARE

Physicians

LOWEST LEVEL OF HEALTH CARE DELIVERY ADDRESSED

Individual Clinicians

TARGET POPULATION AGE

Patients of all ages with the diagnosis of chronic stable coronary artery disease.

TARGET POPULATION GENDER

Either male or female

STRATIFICATION BY VULNERABLE POPULATIONS

Not applicable

Characteristics of the Primary Clinical Component

INCIDENCE/PREVALENCE

- Approximately 13 million Americans are living with coronary artery disease (CAD).
- More than 1 million Americans had a new or recurrent coronary attack in 2001.

EVIDENCE FOR INCIDENCE/PREVALENCE

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

ASSOCIATION WITH VULNERABLE POPULATIONS

Not applicable

BURDEN OF ILLNESS

- Chronic stable coronary artery disease (CAD) is the leading cause of mortality in the United States, accounting for almost 1 in 5 deaths.
- For individuals with CAD, the risk of another heart attack, stroke, and other serious complications is substantial.

EVIDENCE FOR BURDEN OF ILLNESS

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

UTILIZATION

Within the past 2 decades, the number of short-stay hospital discharges for individuals with coronary artery disease (CAD) increased by almost 18%.

EVIDENCE FOR UTILIZATION

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

COSTS

The total annual cost of coronary artery disease (CAD) in the United States is approximately \$130 billion.

EVIDENCE FOR COSTS

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

CASE FINDING

Users of care only

DESCRIPTION OF CASE FINDING

This performance measure is designed for prospective data collection in the office-based practice only. The measurement period may begin with the date of the most recent office visit, regardless of the diagnosis at that visit, and the data collection continues until 12 months are completed.

NQMC STATUS

This NQMC summary was completed by ECRI on September 26, 2003.

COPYRIGHT STATEMENT

This Physician Performance Measurement Set (PPMS) was developed by the Physician Consortium for Performance Improvement (The Consortium) to facilitate quality improvement activities by physicians. The performance measures contained in this PPMS are not clinical guidelines and do not establish a standard of medical care. This PPMS is intended to assist physicians in enhancing quality of care and is not intended for comparing individual physicians to each other or for

individual physician accountability by comparing physician performance against the measure or guideline. The Consortium has not tested this PPMS.

This PPMS is subject to review and may be revised or rescinded at any time by The Consortium. The PPMS may not be altered without the prior written approval of The Consortium. A PPMS developed by The Consortium, while copyrighted, can be reproduced and distributed without modification for noncommercial purposes. Any other use is subject to the approval of The Consortium. Neither The Consortium nor its members shall be responsible for any use of this PPMS.
